

# Qwil demonstration

You can display images:

Our galaxy.

A new paragraph.

A new line in the paragraph.

Another paragraph.

## A subsection

Some bullet points:

- **I'm bold**
- *I'm Italian!*

---

You can display commands as well:

```
$ birb create new-bird
```

Writing equations is supported as long as you know Latex syntax. You can use it in inline mode:  $c = \sqrt{a^2 + b^2}$  or as a block:

$$\theta = \begin{pmatrix} a & b \\ c & d \end{pmatrix}$$
